

create documents

write e-mail

surf the web

without license fees

**Is your current desktop environment cost-efficient? Can it easily be upgraded? How about remotely accessing it?**

**The Anyframe Terminal Server platform offers companies thin client desktop access using the Linux operating system. This concept allows users to take their desktop everywhere, and use it to read mail, surf the web, make spreadsheets, etc. while remaining compatible with existing software applications.**

The ICT department will be pleased with the centralized management features which facilitates system administration and lowers helpdesk load. This, in turn, lowers total cost of ownership of the computer park while offering increased reliability.

### Flexibility

Access your desktop using a thin client, a legacy computer or use our cross-platform client which includes support for Microsoft Windows, Mac OS X, Linux and Symbian OS devices.

### Productivity

Create documents, make spreadsheets, read e-mail and surf the web with our included productivity software. All while using a familiar interface

#### Install and work with

- Microsoft Office
- Lotus Notes

#### Connect to

- SAP Servers
- IBM iSeries (AS/400)
- Windows Terminal Services
- Citrix MetaFrame
- Microsoft Exchange

#### Integrate with Active Directory

#### Share files across

- AppleTalk networks
- Windows networks
- Unix networks
- Novell networks

#### Run virtual MS Windows sessions

### Compatibility

Remain compatible with your existing software applications and server environments.

### Manageability

Manage your Anyframe environment centrally without the need for client-side interventions.

### Profitability

Save money on license fees and eliminate your hardware upgrade cycle. Anyframe Thin Clients are 70% cheaper than traditional desktops.

### Reliability

Thin clients require no maintenance costs and can easily be replaced. The Anyframe Terminal Environment can be configured for high availability.

Citrix MetaFrame

Microsoft Windows Terminal Services   
Microsoft Exchange

Microsoft Windows 9x/NT/2000/XP  
Microsoft Windows CE / Pocket PC

 Symbian OS Phones

mySAP Business Suite 

Red Hat, SuSE, Debian, Mandrake Linux

## Anyframe Terminal Server

The Anyframe Terminal Server is the centerpiece in the Anyframe environment. It stores all user and system data and hosts the user's desktop environment. The terminal server manages the connections from the thin clients over the network. It also allows users to access their desktop using a web interface.

Depending on your requirements the terminal server can be configured with RAID support, multiple power supplies and multiple processors. You can even install multiple servers for increased redundancy and load handling. The Anyframe Terminal Server is installed and configured on-site, training for your administrator is also included.

## Anyframe Thin Client

The Anyframe Thin Client is the user interface to the server. It connects over the network and downloads the desktop environment into memory. The user is presented with his or her own desktop environment in less than 30 seconds. No data is stored locally on the client, making it easy to replace in case of failure.

The thin client has no moving parts whatsoever, this increases reliability of the device. It is also completely silent, because there's no fan to cool down the processor. The AF Client is also available with a wireless network card.

## Anyframe Services

Your Anyframe environment includes one day on-site **installation** support. Additionally one day **training** is included. Linugen also offers various **support** formulas and maintenance contracts. A monthly subscription covers the **updates** of your system. Optionally Linugen provides remote **monitoring** of your Anyframe Terminal Server. If desired, we can take over the complete **management** of your environment with our iManage solution.
